**DRINKING WATER
QUALITY REPORT**

for
**NOTTINGHAM COUNTRY
MUNICIPAL UTILITY DISTRICT**

About Our Drinking Water...

The Texas Commission on Environmental Quality has assessed our system and determined that our water is safe to drink. The analysis was made by using the data in the attached tables. The Text of This Report is Dictated by TCEQ Rules and Texas Statute. The Levels of the Chemical Constituents Detected in the District's Water are Below the TCEQ's Minimum Levels.

**Special notice for the ELDERLY, INFANTS,
CANCER PATIENTS, people with HIV/AIDS
or other immune problems:**

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or Immuno-compromised persons such as those undergoing chemotherapy for cancer; those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care provider. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

Where do we get our drinking water?

Our drinking water is obtained from Groundwater sources. It comes from a Gulf Coast aquifer. The Texas Commission on Environmental Quality has completed a Source Water Susceptibility Assessment for your drinking water source and has found your water to be susceptible to certain substances. For detailed information on these substances, their sources, and what effect these substances may have on your drinking water, please contact John Brock of our Regulatory Affairs department at 713-983-3449.

ALL DRINKING WATER MAY CONTAIN CONTAMINANTS

When drinking water meets federal standards there may not be any health based benefits to purchasing bottled water or point of use devices. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791). Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

En Español

Este reporte incluye informacion importante sobre el agua para tomar.
Para asistencia en español, favor de llamar al telefono (281) 240-1988.

The Nottingham Country MUD Board of Directors meets on the 3rd Monday of each month at 11:30 am at Allen, Boone, Humphries and Robinson, LLP, 3200 Southwest Freeway, Suite 2600, Houston, Texas. Please call 281-240-1988 to confirm meeting date and location.

CONTAMINANTS THAT MAY BE PRESENT IN SOURCE WATER

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- ◆ *Microbial contaminants*, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife;
- ◆ *Inorganic contaminants*, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming;
- ◆ *Pesticides and herbicides*, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;
- ◆ *Organic chemical contaminants*, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and
- ◆ *Radioactive contaminants*, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Federal Food and Drug Administration Agency regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

DEFINITIONS

- AL** Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- MCL** Maximum Contaminant Level - The highest permissible level of a contaminant in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- MCLG** Maximum Contaminant Level Goal - The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.
- NA** Not applicable.
- pCi/L** Picocuries per liter (a measure of radioactivity).
- ppm** Parts per million, or milligrams per liter (mg/l).
- ppb** Parts per billion, or micrograms per liter (ug/l).
- TT** Treatment Technique - A required process intended to reduce the level of a contaminant in drinking water.

IF YOU HAVE ANY QUESTIONS CONCERNING THIS REPORT, PLEASE CALL OUR OPERATING COMPANY AT (281) 240-1988.

THE ATTACHED TABLE CONTAINS ALL OF THE CHEMICAL CONSTITUENTS WHICH HAVE BEEN FOUND IN YOUR DRINKING WATER. THE DATA PRESENTED IN THIS REPORT IS FROM THE MOST RECENT TESTING PERFORMED IN ACCORDANCE WITH APPLICABLE REGULATIONS. U. S. EPA REQUIRES WATER SYSTEMS TO TEST UP TO 97 CONSTITUENTS.

INORGANIC CONSTITUENTS						
The detection levels for radioactive constituents found in the samples are below the maximum contaminant levels. The TCEQ does not require any further action.						
Year	Constituent	Detect	Range of Detected Levels	MCL	MCLG	Source of Constituent
2002	Arsenic (ppb)	4.4	NA	10	0	Erosion of natural deposits;
2002	Barium (ppb)	0.169	NA	2	2	Erosion of natural deposits;
2005	Fluoride (ppm)	0.3	NA	4	4	Water additive which promotes strong teeth; Erosion of natural deposits
2005	Nitrate (ppm)	0.01	NA	10	10	Runoff from fertilizer use; Erosion of natural deposits
RADIOACTIVE CONSTITUENTS						
The detection levels for radioactive contaminants in the samples were below the maximum contaminant levels. The TCEQ does not require further action.						
Year	Constituent	Detect	Range of Detected Levels	MCL	MCLG	Source of Constituent
2005	Alpha Emitters (pCi/L)	6.8	NA	15	0	Erosion of natural deposits
2005	Beta Emitters (pCi/L)	6.0	NA	50	0	Decay of natural or manmade deposits
2005	Total Radium (Radium 226 & 228) (pCi/L)	2.6	NA	5	0	Erosion of natural deposits
DISINFECTION BY-PRODUCTS						
The detection levels for disinfection by-products found in the samples were below the maximum contaminant levels. The TCEQ does not require any further action.						
Year	Constituent	Detect	Range of Detected Levels	MCL	MCLG	Source of Constituent
2004	Trihalomethanes (ppb)	3.7	NA	80	0	By-product of drinking water disinfection
VOLATILE ORGANIC COMPOUND CONSTITUENTS						
NOT TESTED FOR OR NOT DETECTED						
TOTAL COLIFORM						
NOT DETECTED						
LEAD AND COPPER MONITORING						
The sample results below are levels from samples taken inside homes within the District not the source water from the District.						
Year	Constituent	90th Percentile	# of Sites Exceeding the AL	AL	MCLG	Source of Constituent
2003	Lead (ppb)	1.7	0	15	0	Corrosion of household plumbing
2003	Copper (ppm)	0.412	0	1.3	0	Corrosion of household plumbing
DISINFECTANT RESIDUALS						
Year	Substance	Highest Average	Range of Detects (Low - High)	MRDLG	MRDL	Source
2005	Free Chlorine (ppm)	1.30	0.81 - 1.91	4	4	Disinfectant used to control microbes
